SECTION 1 - Introduction to OMMS

OMMS means Outdoor Media Management System. It helps an outdoor advertising company plan work, book media sites, manage field execution, collect proof, create invoices, and track payments in one place.

Think of OMMS as the daily control room for hoardings, pole kiosks, gantries, bus shelters, digital screens, and other outdoor media units.

Why outdoor media companies need OMMS

- To know which sites are available and which sites are already booked.
- To make sure field teams upload proper Proof of Execution, also called POE.
- To reduce manual follow-up on WhatsApp, spreadsheets, and paper files.
- To create cleaner estimates, invoices, payment records, and client statements.
- To help managers catch delays, suspicious uploads, and unresolved issues early.

Basic OMMS workflow

Lead or Client

v

Campaign Planning

v

Site Booking

v

Campaign Execution

v

POE Upload

v

Billing and Payment

v

Issue Tracking and Reporting

Important Note: Simple way to remember OMMS

Inventory tells us what we can sell. Campaigns tell us what the client wants. Bookings reserve the sites. POE proves the work. Billing collects the money.

[Screenshot: OMMS Dashboard Overview]

Place the live OMMS screen image here during company onboarding.

SECTION 2 - User Roles in OMMS

Different people use OMMS for different jobs. A field staff user should not see the same screens as a finance or admin user. This keeps work simple and safer.

Role	What this role does	What this role should avoid
Super Admin	Sets up company, users, roles, permissions, alerts, and system settings.	Should not share admin login or make user changes without approval.
Operations Manager	Tracks campaigns, bookings, field assignments, POE review, issues, and daily alerts.	Should avoid editing finance data unless permitted.
Inventory Manager	Creates and maintains sites, media units, photos, dimensions, location status, and availability.	Should not mark unavailable sites as available without checking.
Sales Team	Plans campaigns, prepares estimates, and follows client approval.	Should not promise a site before checking booking availability.
Finance Team	Issues invoices, records payments, exports statements, and follows overdue balances.	Should not issue invoices before campaign start or without confirmed bookings.
Field Staff	Views assigned work, uploads POE, reports issues, and captures GPS/photo evidence.	Should not upload old photos, wrong-site photos, or duplicate POE.
Client or Public User	Approves estimates or reports issues using secure public links when enabled.	Should not receive internal admin data.

Best Practice: Use the right role

Always give users only the access they need for their job. This protects billing, client data, and operational records.

SECTION 3 - Dashboard

The dashboard is the first screen managers use to understand what is happening today. It gives a quick picture of campaigns, POE work, payments, alerts, and issues.

What to look at every morning

- Running campaigns: shows active work that needs monitoring.
- POE alerts: shows proof uploads that need review or look suspicious.
- Finance widgets: shows outstanding money, overdue invoices, and recent payments.
- Notifications: shows important system messages that need action.
- Operational alerts: shows slow approvals, late tasks, failed uploads, or issue escalations.

Important Note: Why the dashboard matters

A manager can start the day by opening the dashboard and immediately see what needs attention before clients call.

[Screenshot: Dashboard Widgets and Alerts]

Place the live OMMS screen image here during company onboarding.

SECTION 4 - Inventory Management

Inventory is the list of all outdoor media assets that the company can sell or manage. Examples are hoardings, pole kiosks, unipoles, gantries, wall wraps, transit media, and digital screens.

What you enter while creating a site

- Site name, for example SIDCO Chowk Entry Board.
- City, area, and landmark so the team can find it easily.
- Media type, for example hoarding, kiosk, gantry, bus shelter, or LED screen.
- Dimensions, facing, visibility notes, and available photos.
- Availability status, such as available, booked, under maintenance, or inactive.
- Media units if one site has more than one sellable panel or face.

New GPS strategy

Latitude and longitude are no longer required during site creation. This is intentional. Many office users do not know exact field GPS coordinates when creating a site.

How OMMS captures real site GPS

Create site without mandatory coordinates

v

Field staff reaches the site for first POE

v

Mobile app captures GPS automatically

v

Admin verifies the POE

v

OMMS locks the verified GPS to the site

v

Future POEs are checked against this location

Best Practice: Create clean site names

Use names that a field person can understand on the road. Example: Canal Road Near Petrol Pump Left Facing is better than Site 17A.

Common Mistake: Do not create duplicate sites

Before adding a new site, search the inventory. Duplicate sites can cause double booking and wrong POE review.

[Screenshot: Inventory Site Creation Form]

Place the live OMMS screen image here during company onboarding.

SECTION 5 - Campaign Management

A campaign is the client's advertising plan for a date range. It connects the client, selected outdoor media sites, campaign dates, booking, POE, invoice, and payment follow-up.

Example

A school may run a School Admission Campaign across Jammu sites from 1 May to 31 May. The campaign may include hoardings near schools, pole kiosks near busy roads, and bus shelter panels near residential areas.

Typical campaign details

- Client name.
- Campaign title.
- Start date and end date.
- Planned sites or media units.
- Campaign status, such as planned, running, completed, or cancelled.
- Assigned operations and field staff if needed.

Important Note: Why campaigns matter

Campaigns keep all work connected. Without a campaign, booking, POE, invoice, and issue tracking become difficult to follow.

[Screenshot: Campaign Creation Screen]
Place the live OMMS screen image here during company onboarding.

SECTION 6 - Booking Workflow

Booking means reserving a media unit for a confirmed campaign period. Once a site is booked, other teams should not sell the same unit for the same dates.

Booking lifecycle

Check site availability

✓

Select campaign and media units

✓

Confirm dates and rates

✓

Create booking

✓

Assign field staff if required

✓

Track execution and POE

How OMMS helps avoid double booking

- The system checks dates before confirming a booking.
- Booked units can be blocked for the campaign period.
- Operations can see which campaigns are running on which sites.
- Invoices are generated from confirmed bookings, not from unconfirmed plans.

Common Mistake: Do not book from memory

Always check availability in OMMS before confirming a site to a client.

SECTION 7 - Estimate, Challan, and Approval Flow

A Campaign Estimate is a pre-booking document shared with the client for approval. Some teams may use the older word challan, but in OMMS the clearer term is Campaign Estimate.

An estimate is not the same as an invoice. It is a proposal. It can change before the client approves it.

Estimate approval flow

Create Campaign Estimate

v

Share with client

v

Client approves or rejects

v

Approved estimate is finalized

v

Campaign and site booking can proceed

What an estimate includes

- Client name.
- Proposed campaign title.
- Proposed sites or media units.
- Dates, rates, taxes, and total amount.
- Terms or notes for the client.

Important Note: Important difference

Estimate is shared before booking. Invoice is generated after campaign starts and is based on confirmed bookings.

[Screenshot: Campaign Estimate Approval Link]
Place the live OMMS screen image here during company onboarding.

SECTION 8 - Billing and Invoicing

Billing starts after the campaign is confirmed and the campaign start date has arrived. OMMS creates invoices from confirmed bookings, not from unapproved estimates.

What finance should check before issuing an invoice

- Client name and billing details are correct.
- Campaign start date is today or in the past.
- Bookings are confirmed.
- Rates, taxes, GST, and totals are correct.
- Supplier company, bank details, and invoice dates are correct.
- Invoice PDF looks clean before sending to the client.

GST in simple words

GST is tax added to taxable service value when the company is GST registered and the service is taxable. OMMS should show the taxable amount, GST rate, CGST/SGST or IGST, and grand total.

Warning: Do not issue misleading tax invoices

If GST is enabled but the rate is missing, the finance user should fix the tax setup before issuing the invoice.

[Screenshot: Invoice Roster and PDF Download]

Place the live OMMS screen image here during company onboarding.

SECTION 9 - Record Payment

Recording payment means entering money received from the client against an invoice. This keeps outstanding balance and payment status correct.

Full payment vs partial payment

Payment type	Meaning	Invoice status result
Full payment	Client pays the complete invoice balance.	Invoice becomes Paid.
Partial payment	Client pays only part of the invoice amount.	Invoice becomes Partially Paid and balance remains due.
No payment after due date	Invoice is issued but money is not received by due date.	Invoice may become Overdue.

Details to enter

- Payment amount.
- Payment date.
- Payment mode, for example bank transfer, cheque, cash, UPI, or card.
- Reference number if available.
- Notes, for example Part payment received from client finance team.

Common Mistake: Never record overpayment by mistake

Check the balance due before saving. If the client paid extra, ask finance/admin how to handle it.

SECTION 10 - POE (Proof of Execution)

POE means Proof of Execution. It proves that the outdoor media work was actually done at the correct site, on the correct date, with proper photo and GPS evidence.

Why POE is important

- Clients need proof before they trust execution.
- Managers need proof to review field work.
- Finance may need proof before payment follow-up.
- POE helps detect wrong location, duplicate uploads, and old photos.

Field staff POE workflow

Open mobile app

v

View assigned work

v

Reach the correct site

v

Take fresh photo

v

Allow GPS capture

v

Upload POE

v

Check upload status

POE review statuses

Status	Meaning
Approved	The POE is accepted as correct.
Rejected	The POE is not accepted. Example: wrong site or unclear photo.
Rework	Field staff must upload a corrected or replacement POE.
Suspicious	The upload may be outside the site location, missing GPS, or unusual.

Do and Don't for field staff

Do	Don't
Take fresh photos at the actual site.	Do not upload old gallery photos.
Keep GPS enabled before uploading.	Do not switch off location permission.
Check campaign and site name before upload.	Do not upload POE under the wrong booking.
Wait for upload completion.	Do not press upload repeatedly if the app is already retrying.

Important Note: Replacement POE

If a POE is rejected or marked for rework, the field staff may be asked to upload a replacement POE. This is different from an accidental duplicate.

[Screenshot: Mobile POE Upload Screen]

Place the live OMMS screen image here during company onboarding.

SECTION 11 - Issue Management

An issue is a problem reported against a campaign or booking. It may be reported by field staff, operations, or a client through a public link.

Examples of issues

- Creative is torn or damaged.
- Site is blocked by another banner.
- Lighting is not working.
- Client says the campaign is not visible.
- Wrong creative installed at the site.

Issue workflow

Issue reported

v

Operations acknowledges

v

Task assigned

v

Field team fixes issue

v

Fresh POE uploaded

v

Issue resolved

Best Practice: Use clear issue notes

Write what happened, where it happened, and what action is required. This reduces phone calls and confusion.

[Screenshot: Issue Detail and Escalation Screen]
Place the live OMMS screen image here during company onboarding.

SECTION 12 - Notifications and Alerts

Notifications are system messages that tell users when something needs attention. Alerts are more serious messages, usually for delays, suspicious activity, or operational risk.

Common notification examples

- Invoice issued.
- Payment recorded.
- POE uploaded.
- Suspicious POE detected.
- Client issue reported.
- Issue escalated.
- Import or export completed.

Important Note: Unread notifications

Unread notifications should be checked daily. They often show work that is waiting for review.

[Screenshot: Notification Center]

Place the live OMMS screen image here during company onboarding.

SECTION 13 - Reports and Exports

Reports help teams share data outside OMMS. Exports can be used for client review, internal meetings, finance follow-up, and audit records.

Common exports

- Invoice CSV or PDF.
- Client statement PDF or CSV.
- Campaign export.
- POE report.
- Inventory site export.
- Payment history export.

Best Practice: Check filters before export

Always confirm client, date range, campaign, and status filters before sending an export outside the company.

[Screenshot: Export Buttons and Filters]

Place the live OMMS screen image here during company onboarding.

SECTION 14 - Operations and Analytics

Operations and analytics screens help managers monitor the health of daily work. They are useful for finding problems before they become client complaints.

What managers can monitor

- Suspicious POE count.
- POEs outside geofence.
- Pending review count.
- Overdue review count.
- Slow system requests.
- Audit timeline of important actions.
- Role-wise activity, such as field uploads or finance actions.

Important Note: Audit timeline

The audit timeline shows who did what and when. It helps during handover, review, and dispute resolution.

[Screenshot: Operations Analytics Page]

Place the live OMMS screen image here during company onboarding.

SECTION 15 - Mobile App Training

The OMMS mobile app is mainly used by field staff and owners/admins. Field staff use it for assigned work, POE upload, and issue reporting. Admin users can view high-level operations if enabled.

Field staff daily steps

- Login with the assigned user account.
- Open Assigned Work.
- Select the correct campaign and site.
- Reach the site before uploading POE.
- Allow camera and GPS permissions.
- Upload clear photos and wait for completion.
- Report any issue immediately if execution cannot be completed.

Upload retry handling

If internet is weak, the app may retry an upload. The user should not keep creating new uploads manually. OMMS uses upload safety checks to reduce duplicate POEs.

Common Mistake: Do not share mobile login

Every field user should use their own account. Shared logins make it hard to know who uploaded POE.

[Screenshot: Mobile Assigned Work Screen]

Place the live OMMS screen image here during company onboarding.

SECTION 16 - Security and Best Practices

Security means keeping OMMS data safe and trustworthy. Outdoor media data includes client names, rates, payments, site photos, field location data, and invoice details.

- Use strong passwords and do not share them.
- Logout from shared computers.
- Do not send OTPs, passwords, or tokens to anyone.
- Verify campaign and booking before uploading POE.
- Record payments only from verified bank or finance information.
- Use public links only for intended clients or issue reporters.
- Do not download or export client data unless required for work.

Best Practice: Keep clean notes

Good notes protect the team later. Add clear comments when rejecting POE, escalating issues, voiding invoices, or recording unusual payments.

SECTION 17 - Common Daily Workflows

1. Create a site

- Open Inventory.
- Click Create Site.
- Enter name, location, media type, dimensions, and photos.
- Save the site. GPS can be captured later from first verified POE.

2. Create a campaign

- Open Campaigns.
- Choose client.
- Enter campaign name and dates.
- Save campaign plan.

3. Book sites

- Open Bookings.
- Check availability.
- Select campaign and media units.
- Confirm dates and rates.
- Save booking.

4. Upload POE

- Field staff opens mobile app.
- Selects assigned work.
- Captures photo and GPS.
- Uploads POE.
- Waits for upload status.

5. Generate invoice

- Open Billing.
- Select confirmed campaign/bookings.
- Check GST and totals.
- Generate or issue invoice.
- Download PDF if needed.

6. Record payment

- Open invoice detail or billing page.
- Click Record Payment.
- Enter amount, date, mode, reference, and notes.
- Save and confirm balance.

7. Resolve issue

- Open issue.
- Review details and priority.
- Assign task.
- Field staff fixes issue.
- Upload fresh POE.
- Mark issue resolved after verification.

SECTION 18 - Troubleshooting Guide

Problem	Likely reason	What to do
Login not working	Wrong password, expired token, inactive user, or network issue.	Check credentials, reset password, confirm user is active, and try again.
Upload failed	Weak internet, large file, or missing permission.	Keep app open, check network, allow camera/location, and retry.
Duplicate booking warning	Same media unit may already be booked for those dates.	Check booking calendar before continuing.
Invoice PDF issue	Invoice data, GST setup, or PDF service may need review.	Check invoice details and contact admin if PDF does not download.
Missing notification	Preference disabled or user not in recipient role.	Check notification settings and user role.
Payment mismatch	Wrong amount or payment recorded against wrong invoice.	Contact finance admin. Do not delete records without audit.
POE rejected	Wrong site, poor photo, missing GPS, or duplicate upload.	Read reviewer comments and upload corrected replacement POE.

SECTION 19 - Glossary

Term	Simple meaning
POE	Proof of Execution. Photo and GPS proof that work was completed.
Campaign	A client's advertising plan for a date range.
Inventory	All available media sites and units.
Media Unit	A sellable panel, face, display, or screen at a site.
GST	Goods and Services Tax charged on taxable invoices.
Estimate	A proposed cost shared before booking and invoice.
Invoice	A billing document issued for confirmed work.
Suspicious POE	A POE that may have wrong GPS, duplicate upload, missing proof, or unusual data.
Geofence	Allowed distance around a site location.
SLA	Service Level Agreement. Expected response or resolution time.
Audit Trail	History of important actions in the system.
Client Statement	A finance summary showing invoices, payments, and balance for a client.

SECTION 20 - Final Quick Reference

Operator checklist

- Check dashboard every morning.
- Review campaign and booking status.
- Watch pending POE and issue alerts.
- Use notes for handover.

Finance checklist

- Check invoice date, campaign date, client details, GST, and bank details.
- Record payments with reference number.
- Follow overdue invoices.
- Export client statements when needed.

Field staff checklist

- Check assigned work before travel.
- Take clear fresh photos.
- Keep GPS on.
- Upload POE from the correct site.
- Report issues immediately.

Emergency escalation flow

When something urgent happens

Field staff reports issue

v

Operations manager reviews
