

Admin Guide

Administrative operating procedures for users, permissions, dashboard customization, diagnostics, maintenance mode, and controlled platform governance.

Audience	Owners, super admins, and system administrators
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

Admin dashboard with role-based widgets and operational summaries.

Operations cockpit for system health, alerts, imports, exports, and diagnostics.

Protected Training Center with role-aware PDF access.

Admin responsibilities

Admins maintain the operational structure of OMMS: users, companies, permissions, diagnostics, training access, dashboard profiles, and controlled environment mode.

Use Operations for platform health and incident visibility. Use role-based dashboards to keep each user group focused on the work they should see.

Dashboard customization

- Review the role-default widgets before changing a user dashboard.
- Keep required health and alert widgets active for back-office roles.
- Hide optional finance widgets only when the role does not need them.
- Restore defaults when a dashboard becomes too narrow or misses important operating signals.

System diagnostics and maintenance

The System Status panel exposes safe non-secret state: API health, database connectivity, Redis/Celery configuration, failed requests, failed jobs, environment mode, and last successful import/export.

Use maintenance or read-only mode during deployments, migrations, or incidents. Login and safe reads remain available; risky writes are blocked conservatively.

Operational checklist

- Verify roles before adding finance, operations, or admin access.
- Review alerts and audit timeline daily.
- Confirm imports and exports complete before relying on their output.
- Use maintenance/read-only mode only for controlled operational windows.
