

Field Staff Guide

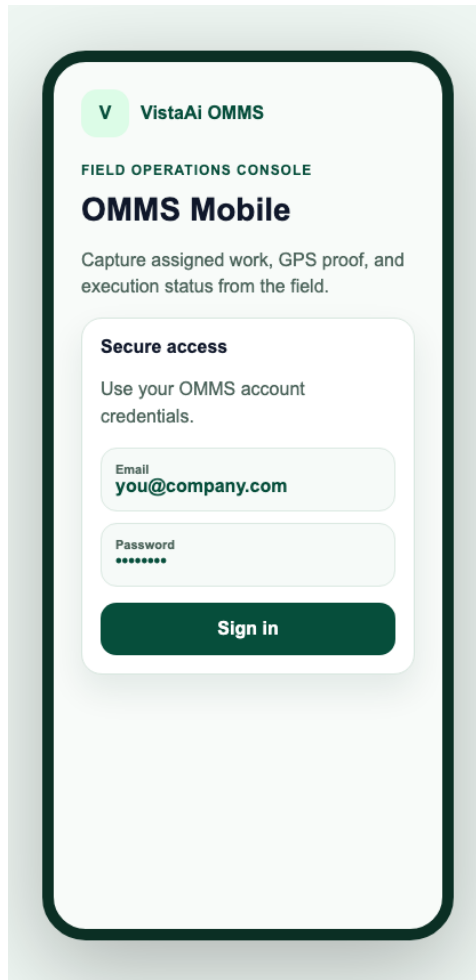

Mobile-first guide for assigned work, site detail review, photo proof capture, GPS readiness, and upload status.

Audience	Field staff and execution teams
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

The screenshot shows a mobile application interface for 'VistaAi OMMS'. At the top, there is a green header with a 'V' logo and the text 'VistaAi OMMS'. Below this, the text 'FIELD OPERATIONS CONSOLE' is displayed in a smaller font. The main title 'OMMS Mobile' is prominently shown. A descriptive sentence follows: 'Capture assigned work, GPS proof, and execution status from the field.' The central part of the screen is a white box with rounded corners containing the login section. This section is titled 'Secure access' and includes the instruction 'Use your OMMS account credentials.' There are two input fields: one for 'Email' with the placeholder text 'you@company.com' and another for 'Password' with a masked input (dots). A dark green 'Sign in' button is positioned at the bottom of the login section.

Mobile login for field operations access.

Submit proof

POE upload screen with site details, GPS readiness, and proof submission.

Admin mobile summary, shown only to authorized admin users.

Mobile workflow

Field staff use the OMMS mobile app to view assigned work, confirm site context, capture or select proof media, attach GPS context, and submit POE for review.

The mobile app follows the web platform language: assigned work, POE upload, GPS ready, upload status, suspicious/rework indicators, and task alerts.

POE submission standards

- Confirm the campaign and media unit before uploading.
- Capture clear photo proof with the display visible.
- Wait for GPS readiness when available.
- Submit once and watch the upload status.
- If read-only or maintenance mode is active, wait for operations to reopen submissions.

After submission

Operations will approve, reject, or request rework. If a proof is rejected or marked suspicious, follow the rework instructions and submit a corrected proof.

Operational checklist

- Verify the assigned site before travel or proof capture.
- Keep the phone location service enabled for GPS context.
- Do not upload unrelated or duplicate photos.
- Report blockers through the assigned work/status flow.
