

Finance Guide

Finance operating guide for estimates, invoices, payments, overdue escalation, collection efficiency, and finance-safe dashboards.

Audience	Finance and accounts teams
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

The screenshot shows the 'Estimate and invoice desk' interface for an admin user. On the left is a dark green sidebar with the 'OMMS CONTROL' header and an 'Operations cockpit' section. Below this are buttons for Dashboard, Inventory, Campaigns, Bookings, POE, Billing, Notifications, Operations, Training, and Setup. The main content area has a light blue header with a warning 'OMMS is operating with elevated caution.' and a 'BILLING' tab. A search bar contains 'Search campaigns, POEs, j' and a dropdown menu is set to 'All'. The user's role is 'admin'. The main section is titled 'Estimate and invoice desk' and includes a workflow diagram: 'Campaign Estimate → Client Approval → Booking → Invoice'. Below this, it states 'Campaign Estimate is shared before booking. Invoice is generated after campaign starts.' and provides instructions on creating a Campaign Estimate, sending it for client approval, and generating an invoice. The interface is divided into two columns. The left column, labeled 'PRE-BOOKING', contains a 'Campaign Estimate' section with fields for Client (dropdown), Proposed campaign (dropdown), Estimate title (text input with 'Airport Corridor Campaign Estimate'), Start date (calendar icon), End date (calendar icon), and Notes (text area). The right column, labeled 'POST-START', contains an 'Invoice' section with a 'Select campaign for invoice' dropdown, a 'Preview Invoice' button, and a 'Generate Invoice' button. A message at the bottom of the right column states: 'No running campaigns are ready for invoice review yet. Campaigns appear here after the start date, and preview will confirm confirmed bookings before invoice can be generated.'

Billing workspace with invoice status, overdue risk, and collection information.

The screenshot shows the 'Dashboard overview' interface for an admin user. On the left is a dark green sidebar with the 'OMMS CONTROL' header and an 'Operations cockpit' section. Below this are buttons for Dashboard, Inventory, Campaigns, Bookings, POE, Billing, Notifications, Operations, Training, and Setup. The main content area has a light blue header with a warning 'OMMS is operating with elevated caution.' and a 'LIVE SUMMARY' tab. A search bar contains 'Search campaigns, POEs, jobs' and a dropdown menu is set to 'All'. The user's role is 'admin'. The main section is titled 'Dashboard overview' and includes a welcome message: 'Welcome back. Your dashboard is tailored for Admin workflows.' Below this, there is a 'Customize dashboard' section with a message: 'Role defaults are applied first. Hide safe optional widgets you do not need.' and a 'Restore defaults' button. At the bottom, it states: 'No dashboard widgets are currently visible. Restore defaults or enable a widget to rebuild this view.' The sidebar also shows the user is signed in as 'admin@vistaal.local' and has a 'Log out' button.

Role dashboard with finance widgets when authorized.

Operations billing intelligence where finance or admin access is available.

Estimate to invoice workflow

OMMS connects campaign value, bookings, invoice generation, payment recording, and collection analytics. Finance users should work from approved estimates and issued invoices rather than ad hoc spreadsheets.

Invoice/payment analytics are permission controlled and should not be exposed to field or client users unless business policy explicitly allows it.

Overdue escalation

- Monitor overdue count, overdue value, and age buckets.
- Review largest overdue clients and critical overdue invoices first.
- Use payment trend and collection efficiency to evaluate weekly cash flow risk.
- Coordinate with operations when billing risk is linked to POE or campaign completion issues.

Collection efficiency

Collection efficiency compares collected amount against invoiced amount. Use it with overdue value and average days to payment to understand whether revenue is moving as expected.

Operational checklist

- Review overdue warning, breach, and critical status daily.
- Record payments promptly to keep dashboard metrics accurate.
- Do not share finance dashboards with non-finance field roles.
- Use alerts and notifications to track repeated billing risk.
