

Inventory Import Guide

Safe staged inventory onboarding guide for Excel/CSV templates, validation preview, confirmation, background import, and results review.

Audience	Inventory managers and operations admins
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

Operations Import / Export workbench and job monitoring.

Dashboard signals that help validate inventory readiness.

Template-first import

Download the Excel template from Operations before preparing inventory. Required site fields are site_code, site_name, site_type, address, city, and state.

Latitude and longitude are optional because OMMS can capture GPS from the first verified POE. Unit code, dimensions, rate, and status are also optional when the source data is incomplete.

Preview before commit

- Upload CSV or Excel to generate validation preview.
- Review valid, warning, failed, and duplicate row counts.
- Fix missing required fields, invalid pricing, invalid dimensions, repeated site/unit codes, and suspicious coordinates.
- Confirm only when the preview is acceptable.

Background processing

Confirmed imports run as background jobs. OMMS tracks progress, partial success, skipped rows, failed rows, audit events, and completion notifications.

Operational checklist

- Always download the latest import template.
- Never assume preview saved inventory records.
- Confirm import only after duplicate and warning review.
- Download or inspect failure reports after completion.
