

OMMS Master Training Manual

A complete onboarding handbook for the OMMS lifecycle, terminology, dashboards, mobile field workflow, and operational controls.

Audience	All OMMS users
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

Role-aware dashboard with campaign, billing, inventory, and action widgets.

Operations intelligence cockpit with live monitoring, filters, system status, and import/export workbench.

Billing workspace for invoice status, overdue risk, payment collection, and statements.

Mobile admin summary for high-level operational visibility.

OMMS operating model

OMMS manages outdoor media from inventory and campaign planning through booking, execution, POE review, billing, reporting, and alerts.

The web SaaS platform is the source of truth for operational workflows, permissions, dashboards, and review controls. The mobile app is the field operations companion for assigned work and proof submission.

Core lifecycle

- Create or import inventory sites and media units.
- Build campaign estimates, confirm bookings, and track execution.
- Field staff upload POE with photo proof and GPS context.
- Operations review POE, manage suspicious proofs, and monitor SLA risk.
- Finance issues invoices, records payments, and tracks overdue escalation.
- Admins monitor alerts, diagnostics, audit activity, imports, exports, and role dashboards.

Safety principles

Tenant and company scoping protect operational data. Finance and billing views stay permission controlled, and client or field roles do not receive operational intelligence that is outside their role.

Imports use staged preview and explicit confirmation before inventory records are committed. Exports and imports run as background jobs with audit trails and notifications.

Operational checklist

- Confirm the user has the correct role before training.
- Use the dashboard first, then drill into modules only when the KPI indicates action.
- Treat alerts, SLA breaches, failed jobs, and overdue invoices as daily operational review items.
- Use Training Center PDFs as controlled reference material for onboarding.
