

Operations Guide

Daily operations playbook for campaign execution, POE review, alerts, jobs, imports, exports, and SLA management.

Audience	Operations managers and coordinators
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

The screenshot shows the 'Operations intelligence' dashboard. On the left is a dark green sidebar with the 'OMMS CONTROL' header and a list of menu items: Dashboard, Inventory, Campaigns, Bookings, POE, Billing, Notifications, Operations, Training, and Setup. The main content area has a light blue header with a warning: 'OMMS is operating with elevated caution.' Below this is a 'LIVE SUMMARY' section with a search bar, a dropdown menu set to 'All', and a 'ROLE' dropdown set to 'admin'. The 'Operations intelligence' title is followed by a description: 'Monitor suspicious POE activity, audit events, request health, imports, exports, alerts, and platform diagnostics.' A 'LIVE' status indicator shows 'Updated just now · refreshes every 45s' and two KPIs: '1 active job(s)' and '0 export running/queued'. A 'Filters' section contains various input fields: 'date from' and 'date to' (both with date pickers), 'company', 'module', 'role', 'campaign', 'site', 'client', 'field agent', 'status' (with a dropdown showing 'pending / suspicious / verified'), 'severity', 'event type', and 'notification type'. An 'Apply filters' button is on the right.

Operations intelligence with live summary, filters, KPIs, and job monitoring.

The screenshot shows the 'Campaign control' dashboard. It features the same sidebar as the previous screenshot. The main content area has a light blue header with the same warning: 'OMMS is operating with elevated caution.' Below this is a 'CAMPAIGNS' section with a search bar, a dropdown menu set to 'All', and a 'ROLE' dropdown set to 'admin'. The 'Campaign control' title is followed by a description: 'Track campaign timelines, budgets, assets, and booking readiness from one shared operations workspace.' The 'Add client' section is marked 'ADMIN ONLY' and includes a note: 'Clients are stored as user accounts with the client role. Create one here and it will appear in the campaign dropdown immediately.' The form contains fields for 'Client name' (Skyline Retail Pvt Ltd), 'Email' (contact@skylineads.com), 'Contact first name' (Nadia), 'Contact last name' (Shah), 'Username' (nadia_skyline), and 'Phone number' (+91 98765 43210). A 'Temporary password' field shows 'Minimum 8 characters'. A note states: 'This creates the client login account. Internal teams can share or rotate it later.' Below this is a 'NEW DROPDOWN ENTRY PREVIEW' section with the title 'Client contact' and a note: 'Client email will appear here once entered.' A 'Create client' button is at the bottom right.

OMMS CONTROL

Operations cockpit
One shared surface for sales, operations, finance, and client reporting.

- Dashboard
- Inventory
- Campaigns
- Bookings
- POE
- Billing
- Notifications
- Operations
- Training
- Setup

OMMS is operating with elevated caution.

POE

Search campaigns, POEs, All

ROLE
admin

Proof of execution

Review executed placements, verification status, and uploaded evidence so campaign delivery can be audited from the same workspace.

Create POE record

WRITE ACCESS

Create a proof-of-execution record against a booking and attach field evidence for operations review.

Booking

Notes
Field notes about what was executed and any verification context.

POE review queue for proof inspection and SLA decisions.

Daily operations rhythm

Start in Operations. Review live KPIs, alert severity, active import/export jobs, POE SLA warnings, POE breaches, suspicious proofs, and campaign risk.

Use the global operational search and filters to move quickly from a risk signal to the affected campaign, POE, invoice, job, or audit event.

POE handling

- Review pending and suspicious POEs before SLA breach.
- Prioritize suspicious unresolved proofs and oldest pending reviews.
- Approve only when media, site, date, unit, and GPS context are acceptable.
- Reject or request rework when the proof is incomplete, mismatched, or outside tolerance.

Jobs and retries

Imports and exports run in the background. Failed jobs can be retried only when eligible, preserving idempotency and avoiding duplicate inventory or reports.

Use audit events and notifications to confirm who initiated a retry and whether it completed successfully.

Operational checklist

- Check POE SLA warning and breach counts.
- Review failed import/export jobs and retry only after understanding the failure.
- Use filters instead of exporting raw logs for daily review.
- Escalate critical campaign risk before the campaign end date.
