

POE Review Guide

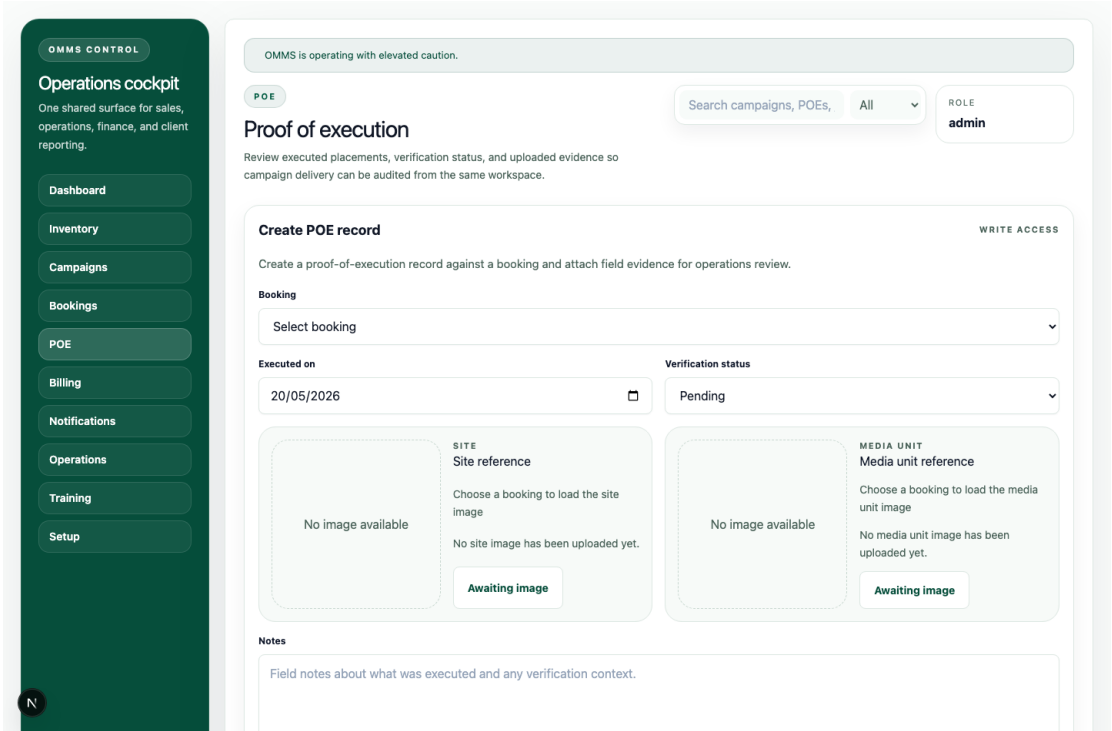

Detailed POE review and SLA guide for proof media, suspicious handling, reviewer workload, badges, and approval decisions.

Audience	Operations reviewers and admins
Updated	May 20, 2026
System	OMMS Outdoor Media Management System

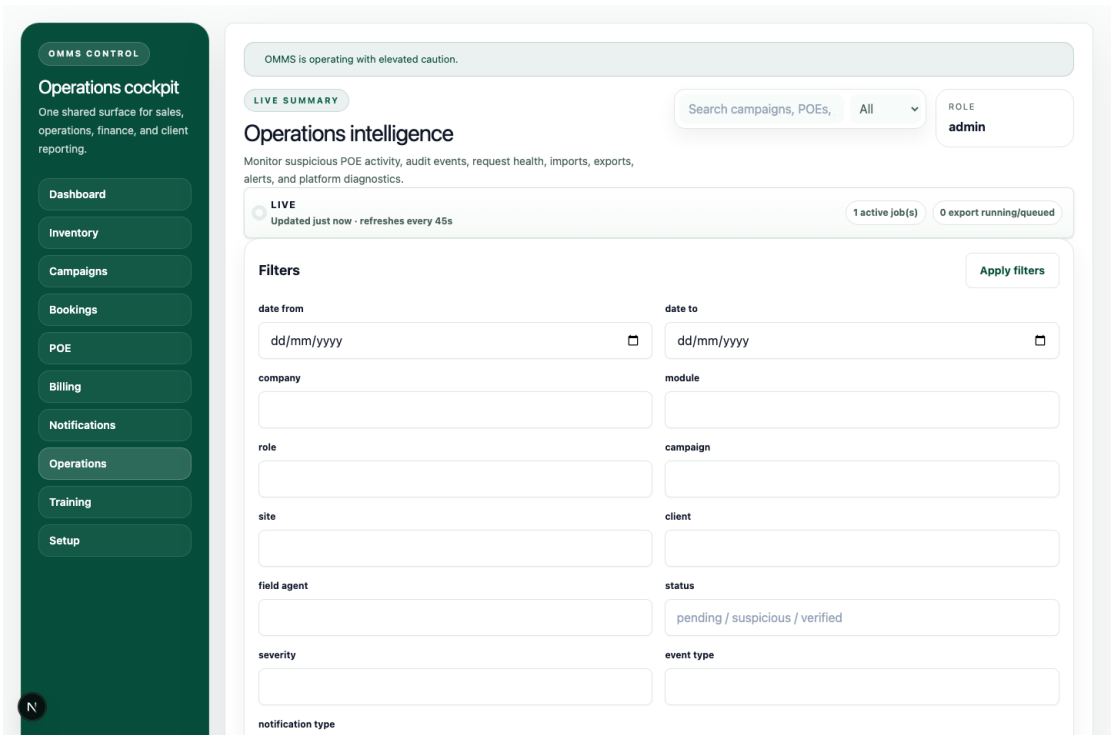

This guide reflects the current OMMS SaaS web platform and mobile operations companion: white and forest green UI, operational intelligence, role dashboards, alerts, imports/exports, POE review, billing risk, and system diagnostics.

How to use this guide

Use the screenshots as orientation, then follow the workflow sections in order. OMMS is role-aware, so users may see a smaller dashboard than the admin examples shown here.

POE review queue and proof review interface.

Submit proof

Mobile POE upload source workflow for field staff.

Review standards

POE review validates that the proof belongs to the right campaign, site, media unit, execution date, and location context. Reviewers should be consistent and document exceptions clearly.

SLA indicators warn after 24 hours for pending reviews and breach after 48 hours. Suspicious POEs warn after 12 hours and breach after 24 hours.

Approve, reject, or rework

- Approve when proof media and metadata are consistent.
- Reject when proof is invalid, unrelated, missing, or materially wrong.
- Request rework when the issue can be corrected by field staff.
- Escalate suspicious unresolved proofs before SLA breach.

Workload balancing

Use reviewer workload and unassigned backlog to prevent delayed approvals. Overloaded reviewers or large unassigned queues should be redistributed by operations leads.

Operational checklist

- Review oldest pending and suspicious proofs first.

- Check campaign, unit, media, date/time, location, and notes.
- Use consistent rejection or rework reasons.
- Watch SLA breach counts in Operations.
